Sat, 08 Dec 2018 12:03:00 GMT constructing a model of protein pdf - In biology, a substitution model describes the process from which a sequence of symbols changes into another set of traits. For example, in cladistics, each position in the sequence might correspond to a property of a species which can either be present or absent. The alphabet could then consist of "0" for absence and "1" for presence. Then the sequence 00110 could mean, for example, that a ...

Thu, 06 Dec 2018 03:30:00 GMT Basic Genetics - The successful construction of a recombinant fusion protein requires two indispensable elements: the component

proteins and the linkers. The choice of the component proteins is based on the desired functions of the fusion protein product and, in most cases, is relatively straightforward.

Thu, 06 Dec 2018 20:26:00 GMT Fusion protein linkers: Property, design and functionality ... - Gene expression is the process by which information from a gene is used in the synthesis of a functional gene product. These products are often proteins, but in non-protein coding genes such as transfer RNA (tRNA) or small nuclear RNA (snRNA) genes, the product is a functional RNA.. The process of gene expression is used by all known lifeâ€™eukaryotes (including multicellular organisms ...
